

Assignment 04 - Subnetting

Total points 100/100 

An assignment on Variable Length Subnet Masking (VLSM)

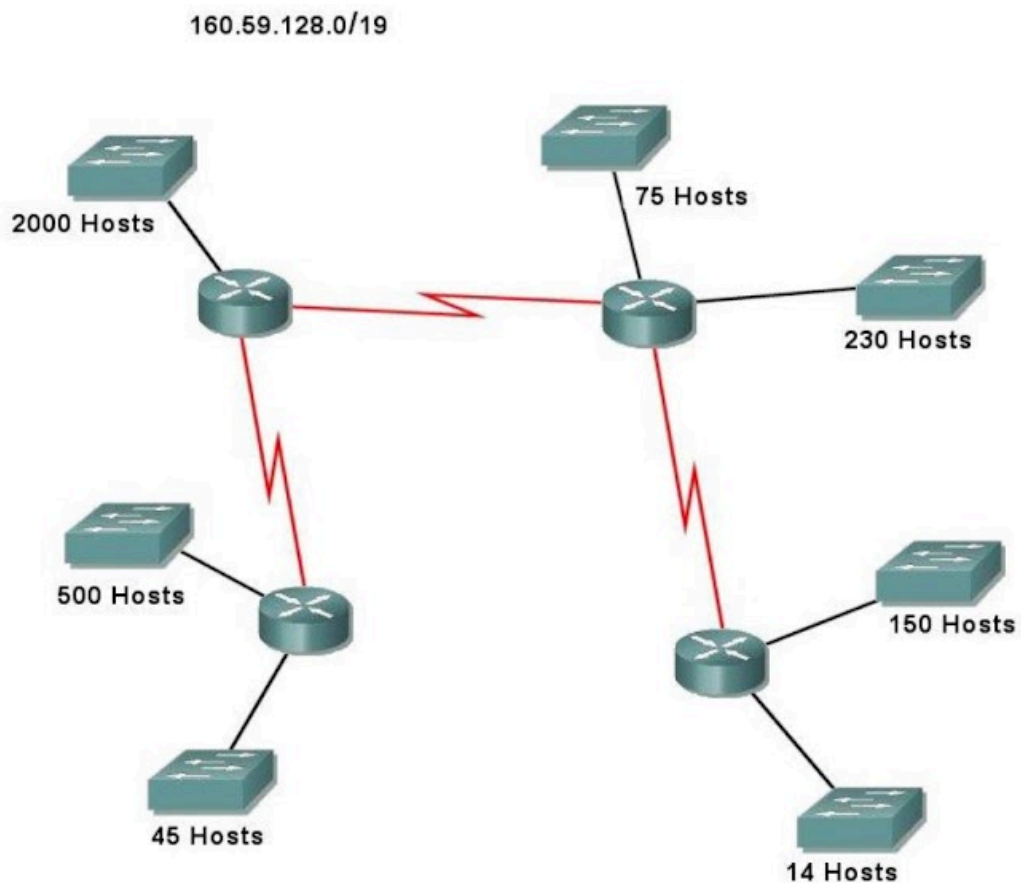

Student ID *

23201644

- ✓ Suppose a company is given the network IP address of **160.59.128.0/19**. *5/5
But as shown in the topology below, the organization requires more than 1 network address. Show how you can have more subnets out of the original network address as per host requirements. The following 7 questions refers to the figure below. **You must calculate on a separate worksheet and then answer the questions. At the end, you need to upload the worksheet. Without the worksheet, this assignment will not be considered.**

1. How many bits you have to keep to have 2000 IP addresses?

- ☐ 7
- ☐ 12
- ☐ 9
- ☒ 11

- ✓ What is the Network Address of the subnet for the LAN with 2000 hosts? Please assign the first subnet that you will get. And write the address in the format : 192.168.10.0/25 [Example] *10/10

160.59.128.0/21

- ✓ What is the Network Address of the subnet for the LAN with 500 hosts? Please assign the first subnet that you will get after subnetting. And write the address in the format : 192.168.10.0/25 [Example] *10/10

160.59.136.0/23

- ✓ What is the Network Address of the subnet for the LAN with 230 hosts? Please assign the first subnet that you will get after subnetting. And write the address in the format : 192.168.10.0/25 [Example] *10/10

160.59.138.0/24

- ✓ What is the Network Address of the subnet for the LAN with 150 hosts? Please assign the first subnet that you will get after subnetting. And write the address in the format : 192.168.10.0/25 [Example] *10/10

160.59.139.0/24

- ✓ What is the Network Address of the subnet for the LAN with 75 hosts? *10/10
Please assign the first subnet that you will get after subnetting. And
write the address in the format : 192.168.10.0/25 [Example]

160.59.140.0/25

- ✓ What is the Network Address of the subnet for the LAN with 45 hosts? *10/10
Please assign the first subnet that you will get after subnetting. And
write the address in the format : 192.168.10.0/25 [Example]

160.59.140.128/26

- ✓ What is the Network Address of the subnet for the LAN with 14 hosts? *10/10
Please assign the first subnet that you will get after subnetting. And
write the address in the format : 192.168.10.0/25 [Example]

160.59.140.192/28

- ✓ How many minimum bits do you have to keep for a WAN link? * 5/5

- ☐ 5
☐ 1
☐ 4
☒ 2

- ✓ What is the Network Address of the subnet for WAN/Serial Link 1? 10/10
Please assign the first subnet that you will get after subnetting. And write the address in the format : 192.168.10.0/25 [Example]

160.59.140.208/30

- ✓ What is the Network Address of the subnet for WAN/Serial Link 2? Please 5/5
assign the first subnet that you will get after subnetting. And write the address in the format : 192.168.10.0/25 [Example]

160.59.140.212/30

- ✓ What is the Network Address of the subnet for WAN/Serial Link 3? Please *5/5
assign the first subnet that you will get after subnetting. And write the address in the format : 192.168.10.0/25 [Example]

160.59.140.216/30

Please upload your handwritten work sheet, if you want to.
